

DUAL!D CARD HOLDER ☆

| ISO card with UHF and proximity or smartcard technology

KEY FEATURES:

- Identify vehicle and driver
- Holds Nedap UHF and combi cards
- Supported by uPASS Dual!D settings
- Easy integration with two operating modes
- Identification up to 10 meters [33 ft]
- Passive battery free tags
- Optional customised printing
- EPC Gen 2 compatible

Dual!D

The ability to identify both the driver and the vehicle has been a unique feature of our well established TRANSIT product line. Access control cards are used to identify the person. A Booster device inside the card reads the card and sends the card ID and the vehicle ID to our reader.

A similar feature is now also available for our uPASS Reach UHF reader offering long-range identification up to 10 meters [33 ft] with uPASS Target or 5 meters [16 ft.] with uPASS Reach*. Nedap has developed a card holder that can be mounted on the windshield. The card holder is used to identify the vehicle. The reader is configured to only proceed with reading any ID if there is a valid Nedap ID for vehicles present. The reader will at that time identify the vehicle (card holder) and the driver (the card in the card holder). Only relevant UHF tags are read which prevents errors and limits security risks.

The UHF card can be taken from the card holder and used by the driver to get access to the building. For this purpose Nedap provides a wide range of UHF combi cards that combine UHF technology with regular access control cards (HID, MIFARE, Legic, Nedap, EM, etc).

Smart Design

The Dual!D card holder can easily be fixed to a windshield with the large adhesive front side of the card holder. Once properly glued to the windshield the card holder will be difficult to remove. When removed, you can easily tell so by the same that is done to the special foam material that was stuck to the windshield, which makes it a tamper evident system.

You can easily slide cards into the holder. The card holder positions the card with sufficient distance to the glass to ensure an optimal reading distance by the reader. The adhesive foam is provided with a Nedap design. When you procure larger volumes a custom design is possible.

Applications

Dual!D can be applied in many situations: corporate car parks, residential car parks at condominiums, vehicular access gates to commercial estates: a lot of applications come to mind. If the fleet of cars to be managed is not changing too rapidly and you would like to offer convenient access at a higher security level then the Dual!D extension to our UHF products is a really good option to consider.

Benefits

- Only allow authorized drivers in authorized vehicles access
- Very easy integration with any access control system or parking management system
- Easy one click configuration with the UHF tool of the uPASS Reach
- Strong adhesive used to visually identify tampering
- Custom design for larger volumes possible
- Use UHF combi cards to combine convenience with security

* when used according guidelines and under normal circumstances

SPECIFICATIONS

Technical information	Dual!D Card Holder
Operating frequency	902 - 928 MHz
Standard	EPC Gen 2
Dimensions	112 x 30 x 20 mm [L x b x h]
Protection	IP54 [approx. NEMA 2]
Colour	Grey, appr. according to RAL 7035
Material	ABS with polyester adhesive side
Operating temperature	-20 ... +70°C [-4 ... +158°F]
Detection range	up to 10 m [33 ft] with uPASS Target, up to 5 m [16 ft] with uPASS Reach
Humidity	10% ... 93% relative humidity, non condensing
Customisation	Customised tag printing on adhesive side on request only
Identification	R/O Read only number
Tag Formats	The Card Holder is programmed in a Nedap proprietary format. The to be inserted ISO cards can be formatted with: Wiegand, Magstripe, Nedap XS format (compatible to Nedap's tag format) (see for more information the How to order Guide)
Mounting	Onto the windshield, the card holder is featured with a standard pressure-sensitive adhesive back
Part numbers	9966765 Dual!D Card Holder
